UNITED STATES MARINE CORPS BACHELOR ENLISTED QUARTERS

This LEED Platinum Certified project included a 1.5 MW solar energy system for the three 4-story BEQ's (576 two-person rooms), a landmark projection tower, a 500-seat outdoor amphitheater, and a 706-space 4-story parking garage. This project is a Design-Assist project that contained a high degree of technical and logistical challenges. Baker used BIM and prefabrication to its fullest on this project. The project also had multiple phasing and was adjacent to occupied buildings.
