

INTERFAITH COMMUNITY SERVICES

In addition to a continuum of programs and services, Interfaith Community Services operates a variety of needs-based housing options for low-income families. This project included installation for 84 Interfaith Community Services multi-family housing units in both Escondido and Oceanside, some roof-mounted and some carport-mounted. The project has an estimated annual production of 179,878 kWh of energy – which is equivalent to about 65% of the multi-family housing sites' current electric usage. The project savings are approximately $22,00 per year in electricity costs.
