## SAN DIEGO ACADEMY

### The Challenge:

According to Interfaith Power & Light (IPL), a nonprofit with experience helping religious congregations respond to climate change, more and more places of worship and education are going solar to promote eco-stewardship while enjoying financial savings

Principal Nic Lindquist shared, “As a small private Seventh-day Adventist Christian school, we believe that part of our duties as Christians is to take care of the earth that God created. And beliefs aren’t worth much if you don’t put them into practice – that’s why we decided to go solar. It reinforces that we are indeed stewards of the earth looking towards the future.”

## Project Specs

Location :

National City, California

**Baker
