

HUNTER INDUSTRIES

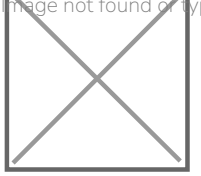

Baker Electric installed this 243 kW system at Hunter Industries in San Marcos, CA. The system includes 972 panels that are mounted among two roofs and between many sky lights.

Hunter Industries announced on April 9, 2015 that their Building 1840 System 2 solar generation public view web site was now on line at: https://solarems.net/kiosks/296. Contact us today for the installation of Baker Solar in San Marcos, CA.

To cut Hunter Industry's greenhouse gas emissions 30 percent by 2020 and to become more energy independent, they wanted to increase their renewable energy portfolio. Hunter wanted to leverage the 267 days of sunshine per year that their Southern California location receives, which is a great source of renewable energy. To help them achieve their goal, Hunter chose Baker and we installed almost 1,000 panels
