OCEAN DISCOVERY INSTITUTE

Ocean Discovery Institute (ODI) is a non-profit organization in the City Heights neighborhood of San Diego that provides tuition-free learning programs to local students living in underserved communities. ODI reaches 6,000 student a year, empowering them to someday enter a STEM field like biotech, engineering, marine biology, and many more.

Baker Electric was able to install two Solar Trees for Ocean Discovery Institute to allow them to become an energy steward of the community, to financially insulate their facilities from rising utility rate hikes, and to essentially reroute donations from going towards utility bills to going toward programs for students.

Project Specs

Location : San Diego, CA

System Size 50 kW

Number of Panels 140

Annual Energy Cost Savings null
