

SHERIFF TECHNOLOGY AND INFORMATION CENTER (STIC)

This 47,000-square-foot, LEED Gold-certified facility was developed to consolidate and modernize operations for the San Diego County Sheriff's Wireless Services and Data Services Divisions. The facility includes 40,000 square feet of administrative offices, operations areas, and warehouse space, along with a 7,000-square-foot critical data and wireless communications center that supports the County's Emergency Communications System.

The site also features a 125-foot wireless communications tower and a versatile media center designed to support both the Sheriff's Department and the County Office of Emergency Services. An outdoor plaza, typically used as an employee gathering space, is integrated with power and communication connections to enable rapid setup for media coverage during emergency events.

Project Specs

Location : San Diego, California

Owner : San Diego County Sheriff's Dept.

General Contractor : DPR Construction

Delivery Method : Design-Bid-Build

Project Value : $110 Million
